IT3		Get reservation by username and status	POST "/api/reservations" GET "/api/reservations/user/status/PENDING"	reservations.size() = 1 reservationQuantity = 2 reservationDate = now	reservations.size() = 1 reservationQuantity = 2 reservationDate = now		Pass
IT4		Cancel a reservation	POST "/api/reservations" PATCH "/api/reservations/" + reservationId + "/cancellation"	reservations.size() = 1 reservationQuantity = 1 reservationDate = now foodItems.size() = 1 foodItemsQuantity = 10	reservations.size() = 1 reservationQuantity = 1 reservationDate = now foodItems.size() = 1 foodItemsQuantity = 10		Pass
IT5		Complete a reservation	POST "/api/reservations" PATCH "/api/reservations/" + reservationId + "/completion"	reservations.size() = 1 reservationQuantity = 1 reservationDate = now foodItems.size() = 1 foodItemsQuantity = 9	reservations.size() = 1 reservationQuantity = 1 reservationDate = now foodItems.size() = 1 foodItemsQuantity = 9		Pass
IT6		Create a reservation with more quantity than foodItem	POST "/api/reservations"	"Not enough quantity available"	"Not enough quantity available"		Pass
IT7		Create a reservation with quantity of 0	POST "/api/reservations"	"Quantity must be at least 1"	"Quantity must be at least 1"		Pass
IT8		Cancel another user's reservation	POST "/api/reservations" "/api/reservations/" + reservation.getId() + "/cancellation"	Reservation does not belong to user	Reservation does not belong to user		Pass
IT9		Creating a new membership	POST "/api/memberships/community/1 with authorised user"	New membership created with correct userProfileId and communityId, role set to member, isbanned set to false	Returns new membership		Pass

T#	Test Id	Description	Steps	Expected Results	Actual Result	Screenshot	Status
IT10	createMembership_unauthorised		POST /api/memberships/community/ 1 with unauthorised user	Unauthenticated user attempts to create membership	Service throws InvalidCredentialsException		Pass
IT11	createMembership_authenticationMissing		POST /api/memberships/community/ 1 missing user	Request made without any authentication	Service throws InvalidCredentialsException		Pass
IT12	updateMembership_authenticated		PATCH /api/memberships/community/ 1/user/2 with valid JSON body	Authenticated user updates membership successfully	Service returns updated Membership		Pass
IT13	updateMembership_unauthorised		PATCH /api/memberships/community/ 1/user/2 with unauthorised user	Authenticated user lacks permission to update membership	Service throws InvalidCredentialsException		Pass
IT14	deleteMembership_authorised		DELETE /api/memberships/community/ 1/user/2 with authorised user	Authenticated user deletes membership successfully	Membership deleted successfully		Pass
IT15	deleteMembership_unauthorised		DELETE /api/memberships/community/ 1/user/2 with unauthorised user	Authenticated user lacks permission to delete membership	Service throws InvalidCredentialsException		Pass
IT16	createMembership_updatesDatabase		POST api/memberships/community/1	A membership is created and stored inside the database	New membership is added to database (checked by integration test)		Pass
IT17	getMembershipsByCommunity_returnsMemberships		Create two memberships inside a community, then GET api/memberships/community/1	Should return a list with both memberships with same details given when created	Same as expected		Pass
IT18	updateMembership_membershipDoesntExist		PATCH api/memberships/community/1 /user/4 (no user with userId 4 exists)	Should throw an EntityNotFoundException, leading to a notfound http response	Returns notfound status		Pass
UT29	createMembership_validInput		MembershipServiceTest.java	New membership created and returned with correct userprofileId and communityId, role set to member, isbanned set to false	Membership returned correctly		Pass
UT30	updateMembership_validInput		MembershipServiceTest.java	Membership updated with supplied isBanned and role and returned	Membership correctly updated, including in the database		Pass
UT31	getMembershipByCommunityAndUserProfile_validMembers hip		MembershipServiceTest.java	Returns the membership with correct community and user profile	Returns the corresponding membership		Pass
UT32	deleteMembership_validMembership		MembershipServiceTest.java	Deletes the membership from the database without errors	Deletes the membership from the database		Pass
UT33	Create a food item		FoodItemServiceTest.java	Creates a food item and saves it to the repository	Creates a food item and saves it to the repository		Pass
UT34	Return all food items with an available status		FoodItemServiceTest.java	Returns a list of food items with the correct status	Returns a list of food items with the available status		Pass
UT35	Return all food items with an available status		FoodItemServiceTest.java	Returns a list of all food items with the correct status	Returns all food items saved in the repository		Pass
UT36	Returns all food items that that won't expire before a specified date		FoodItemServiceTest.java	Returns a list of food items with a expiry date before the specified deadline	Returns a list of food items with a expiry date before the specified deadline		Pass
UT37	Create a food item with a quantity less than 1		FoodItemServiceTest.java	"Quantity must be greater than 0"	"Quantity must be greater than 0"		Pass
UT38	Create a food item with an expiry date before today		FoodItemServiceTest.java	"Food item has already expired"	"Food item has already expired"		Pass
IT19	Create and post a food item		POST "/food-items"	name = Pasta status = AVAILABLE size = 1	name = Pasta status = AVAILABLE size = 1		Pass
IT20	Retrieve all food items		GET "/food-items"	size = 1 name = Soup	size = 1 name = Soup		Pass
IT21	Search food items by name		GET "/food-items/search"	name = Curry	name = Curry		Pass
IT22	Search food items by tags		GET "/food-items/tag"	size = 1 name = Vegan Dish	size = 1 name = Vegan Dish		Pass
IT23	Retrieve all available food items		GET "/food-items/available"	size = 1 status = available	size = 1 status = available		Pass
UT44	Create a community with an existing name and location		CommunityServiceTest.java	"A community with the same name already exists in the this location."	"A community with the same name already exists in the this location."		Pass
UT45	Create a valid community		CommunityServiceTest.java	Community saved to the repository	Community saved to the repository		Pass
UT46	Delete a non-existent community		CommunityServiceTest.java	"Community not found with id: 1"	"Community not found with id: 1"		Pass
UT47	Delete a community		CommunityServiceTest.java	Community deleted from the repository	Community deleted from the repository		Pass
UT48	Update a non-existent community		CommunityServiceTest.java	"Community not found with id: 1"	"Community not found with id: 1"		Pass
UT49	Update a duplicate community		CommunityServiceTest.java	"A community with the same name already exists in the this location."	"A community with the same name already exists in the this location."		Pass
UT50	Update a valid community		CommunityServiceTest.java	Community updated in repository	Community updated in repository		Pass
UT51	Get a Non-Existent Community		CommunityServiceTest.java	"Community not found with id: 1"	"Community not found with id: 1"		Pass
UT52	Get a valid Community		CommunityServiceTest.java	CommunityDTO returned	CommunityDTO returned		Pass
UT53	Get all communities in a location		CommunityServiceTest.java	total elements = 1	total elements = 1		Pass
UT54	Get all communities in a null location		CommunityServiceTest.java	total elements = 1	total elements = 1		Pass
IT24	Create a community		POST "/api/communities"	name = "Test Community, location = "Test Location", description = "Test Description", id generated	name = "Test Community, location = "Test Location", description = "Test Description", id generated		Pass
IT25	Create a community with an invalid name		POST "/api/communities"	Validation error	Validation error		Pass
IT26	Create a community with an existing name and location		POST "/api/communities"	Community already exists error	Community already exists error		Pass
IT27	Get community by id		GET "/api/communities/1"	communityId = 1	communityId = 1		Pass
IT28	Get all communities in a location		GET "/api/communities? location=Test Location A"	length = 2	length = 2		Pass
